
TECHNOLOGY AND SECURITY

Technology and security for your branded investment experience.

We provide a hosted platform service with configurable client-facing experiences, connecting web, iOS and Android applications with the processes your product needs.

For each offering, client control, product roles, provider scope and the evidence required for its controls are confirmed. Configuring the platform does not, by itself, create an approval, licence, custody role or provider commitment.

DEPLOYMENT

Agree what your branded investor experience will include

Your branded investor experience brings joining and eligibility checks, digital holdings and transaction records, administration and reporting together. Web, iOS and Android can be included under your brand when they are in the agreed scope.

Your organisation retains

Your brand, assets, strategy, economics and investor relationships remain yours. For an existing product, they remain yours while the governing rights, permissions and approvals, investor and registry data, providers and integrations are assessed.

Product parties approve

The issuer, licensee and governance participants approve the product rules, disclosures and regulated activities allocated to them. Providers deliver their documented account, payment and settlement services.

We connect

We connect the agreed branded journeys, onboarding, eligibility, records, administration and reporting with specified provider or service integrations.

HOW THE OPERATING ARRANGEMENTS FIT TOGETHER

Clear responsibilities for money and records.

Your organisation

Set the commercial proposition

Brand, assets, strategy, economics and investor relationships.

Relevant product parties

Approve the product rules

Issuer, licensee and governance arrangements establish eligibility, documents and rights.

Fractional Assets

Provide technology and operating support

Configured applications, onboarding, provider connections, workflows and administration for the agreed offering.

Investor

Bank account

Account and payment providers

Available cash account

Approved product terms

Permitted investment events

Funding and available-cash withdrawals use provider services. Subscriptions, income and exit events follow the applicable product arrangements.

↓ Investment holdings and transaction records

The records reflect approved activity and support registry, administration and reporting. The legal instrument and product documents establish investor rights.

We connect the technology and operating workflows. Account providers deliver the money services; in the agreed provider-led operating model, the operator does not take custody of investor cash. Cash availability is not investment liquidity, and exits are not guaranteed.

RIGHTS AND MONEY

Keep product rights, records and provider-led cash separate.

Product instruments and documents establish investor rights. Digital records support registry, administration and reporting. They do not, on their own, create rights or constitute a legally definitive asset record without product-specific evidence. Where included, account, payment, virtual-account and settlement functions are delivered by the applicable providers for the documented account holder under their own terms. In this model, the platform operator does not hold investor cash.

Available cash is separate from an investment exit.

Available cash may be withdrawn only through the applicable payment process, subject to provider terms, verification and transaction controls. Selling, transferring, redeeming or obtaining a buyback of a fractional interest follows the approved product terms, eligible buyers, platform functionality and market conditions. Fractional interests are not bank deposits, and liquidity and exit timing are not guaranteed.

MYBRIX REFERENCE

See a real branded experience with its product-specific facts.

MyBrix is a documented property example of a branded investor experience and product configuration. It brings together a branded investor journey, documented product roles, contractual economic rights, provider-led cash arrangements and controlled investment records within its own property-focused arrangement.

MyBrix investor experience across web and mobile.
Powered by Fractional Assets

Shown here is the genuine MyBrix investor experience. Its product arrangements are specific to MyBrix.

Defined rights and product roles

The MyBrix PDS describes Brx as contractual economic rights and makes clear that product roles remain specific to MyBrix.

Controlled digital participation

The MyBrix PDS describes controlled digital holding and transaction records. Those records reflect MyBrix product activity and are not a record of real-property legal title.

Published branded experiences

FundMyProperty is an owner-facing funding-assessment entry. MyBrix and NestEgg have published investor web or app experiences. Together, they show distinct branded entry points and investor journeys for their respective property funding or investment contexts.

RELEASE DILIGENCE

Agree the requirements and evidence before release.

Australian-hosted infrastructure and an in-house developed core platform provide a strong operational foundation. Our platform services and application data are hosted in Sydney, Australia. Detailed controls, service scope and supporting evidence are assessed through due diligence for the services you will use.

Security built into the service

Security is considered across the platform, including access controls, data protection and operational processes.

Responsible information handling

We take a sensible, proportionate approach to information security, privacy and data handling, with the relevant controls and responsibilities confirmed through due diligence.

Automation with appropriate oversight

Where automation is used, it is designed to support consistency, efficiency and compliance. Human oversight remains important for key decisions and exceptions.

Clear implementation and accountability

Every implementation is configured to suit the client's operating model, responsibilities and regulatory context.

Review evidence through due diligence.

Detailed controls and governance arrangements are assessed through due diligence and agreed before implementation.

SERVICE DOCUMENTATION

Check which documents apply to your offering

Product and service context

The account and service agreements identify the provider, payment and virtual-account arrangements that apply to the offering. Product and service arrangements remain specific to the relevant documentation.

INVESTOR EXPERIENCE

Keep the technology out of the investor's way.

Investors see a familiar branded investment application. Connected records, provider services, product controls and operating responsibilities sit behind the approved experience.

Talk through your technology and security requirements.

Discuss the technology and security requirements, operating responsibilities and provider scope for your proposed configuration.
